Profile

I'm a web developer who loves working on the front-end. I'm capable of holding my own when it comes to backend work but I just feel in my element when working on the visual side of things. I like to think of myself as a developer-designer hybrid. I love keeping things simple and focusing on the user - it's not about what more you can add but rather what you can take away.

Experience

Web Developer, Fogg, Saxonwold – Mar 2016 - Present

Fogg has been my first experience working in an agency environment. I've worked on projects that include some heavy weights like Eskom and Cape Town Tourism. Working with tools, frameworks and languages such as Wordpress, PHP, Node, Gulp and React.

Software Developer, Prosperity Group, Constantia – Aug 2015 - Feb 2016

Prosperity Group is an umbrella company that covers the medical and insurance sectors. Here I mainly worked on back-end processes and web services done in Java, as well as hybrid mobile apps done in Cordova using Ionic and AngularJS.

Commercial Developer, Redscreen, Fourways – Jan 2015 - Jul 2015

At Redscreen I got exposed to the corporate world doing consulting work for various financial institutions such as Nedbank, Absa and Liberty. Technologies I worked with ranged from ASP.Net MVC, MS SQL, Pervasive SQL, SQL Server Reporting Services (SSRS) and Microsoft SharePoint.

Software Developer, Lancet Laboratories, Auckland Park – May 2011 - Dec 2014

Lancet was my first full-time job as a developer. I worked mainly in Java creating servlets and management screens for Liferay, web services, as well as getting exposure to MS SQL. I also developed a Windows Phone version of Lancet's pathology mobile app.

Education

Intec College – Diploma in Computer Programming, 2011
